

Hystax OptScale

Technical Due Diligence and Audit

Reduce investment risks by identifying technical bottlenecks and red flags

Hystax

Founded in 2016,
customers in 43 countries

Airbus, Nutanix, Orange,
Nokia, DHL, Burger King -
some of **our customers**

Top questions

- How scalable is a startup's product?
- When are the critical architecture redesigns and delays in delivery required?
- How frequently does the startup release?
- How mature is a startup's CTO and an R&D team?

Technical issues leading to losses

Bad product architecture decisions lead to decline in release pace or to a case when further releases are impossible without re-architecting and re-implementing core parts of a product

Bad IT infrastructure decisions lead to extra expenses and delays to re-platform or migrate to another infra type

Immature CTO and R&D team lead to bad product development decisions and they cannot deliver new releases in time

Wrong geography or technology decisions lead to inability to scale an R&D team and find the right talent

Hystax OptScale

- Automated technical due diligence and audit to identify red flags and give startups recommendations how to improve their state
- Audit of infrastructure, product architecture, QA & Dev process, source code and team maturity
- Pool of field experts to validate and extend the technical audit

Benefits of using OptScale

- ✓ Technical due diligence and audit in areas where you don't have technical expertise
- ✓ Concentrate your technical experts on the most important deals and don't waste time on troublesome prospects
- ✓ Highlight inconsistencies between an automated report and survey responses
- ✓ Startups get insights into how to improve their technical decisions
- ✓ Regular technical audits to observe how products are developed and released in dynamics

How OptScale works

Automated infrastructure, CI/CD, security, source code quality and product development audit

Survey to clarify architecture, infrastructure and R&D team decisions

Private and public reports

Pool of experts to validate and extend the reports

Monthly audits to highlight changes in infrastructure, architecture and release frequency

Public and private reports

- **Public report** - shared with a startup and a VC to list issues and share recommendations on how to improve technical decisions
- **Private report** - shared with VC only to highlight red flags, inconsistencies in responses with an automated analysis and to identify potential risks
- Technical experts can be involved by request to interview a startup and extend / validate the private report
