Hystax Acura Cloud Migration Project Milestones

To perform cloud migration project the following steps need to be completed:

1. Identify workloads to be migrated (machines, networking)
   Result: a list of machines and network settings (security groups, routes, VPNs etc.)

2. Identify dependencies between business application components.
   Result: topology of business application used later in a Migration Plan

3. Recreate network settings on a target platform

4. Replication of business applications (full and incremental)

5. Orchestrated launch of test migrations – configure and test

6. Final Cutover and uninstalling internal replication agents
